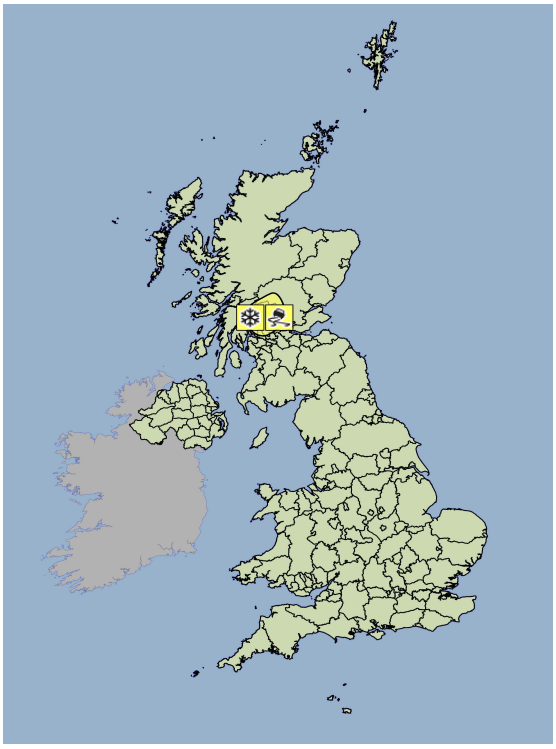
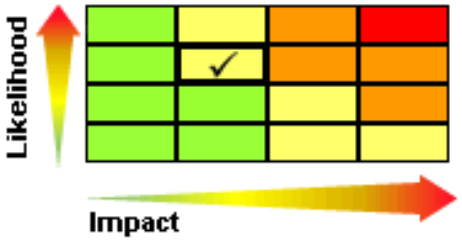
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex set of frontal systems will push areas of precipitation into Scotland late on Sunday evening, this easing again during the course of Monday afternoon. It will be worth keeping up to date in case of changes in the expected extent of heavier snowfall.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **23:15 on Sun, 17th Jan 2016** until **13:00 on Mon, 18th Jan 2016**

A mixture of sleet and snow will gradually spread eastwards overnight on Sunday, before easing during Monday afternoon. This is expected to lead to further accumulations of snow in places, with 1 to 3 cm quite widely, and 4 to 8 cm in some places, particularly over higher ground. Ice will be an additional hazard in some areas, especially where sleet falls onto sub-zero surfaces.

Please be aware of the potential for difficult winter driving conditions.
